

# TUNE UP YOUR DAIRY REFRIGERATION EQUIPMENT WITH FOCUS ON ENERGY®

Milk cooling is one of the biggest energy expenses on a dairy farm. Tuning up refrigeration systems boosts efficiency and extends equipment life. It can also reveal potential problems before they occur.

A refrigeration tune-up includes the following:

- Cleaning and inspecting condenser coils.
- Cleaning and inspecting evaporator coils.
- Cleaning drain pan.
- Cleaning and inspecting fans.
- Cleaning or replacing screens, grills, filters, and drier cores.
- Inspecting and adjusting heat reclaim operation.
- Tightening all line voltage connections.
- Inspecting and replacing relays and capacitors as needed.
- Adding or removing refrigerant charge.

## Financial Rebate

Work directly with a participating Dairy Refrigeration Tune-up Trade Ally and receive a discount of **\$40 per compressor tuned-up**. Customers are limited to one refrigeration system tune-up rebate per site per calendar year.

## Get Started

Contact a participating Dairy Refrigeration Tune-up Trade Ally to schedule a tune-up today.

Find a list of participating Trade Allies at [focusonenergy.com/agribusiness](http://focusonenergy.com/agribusiness).

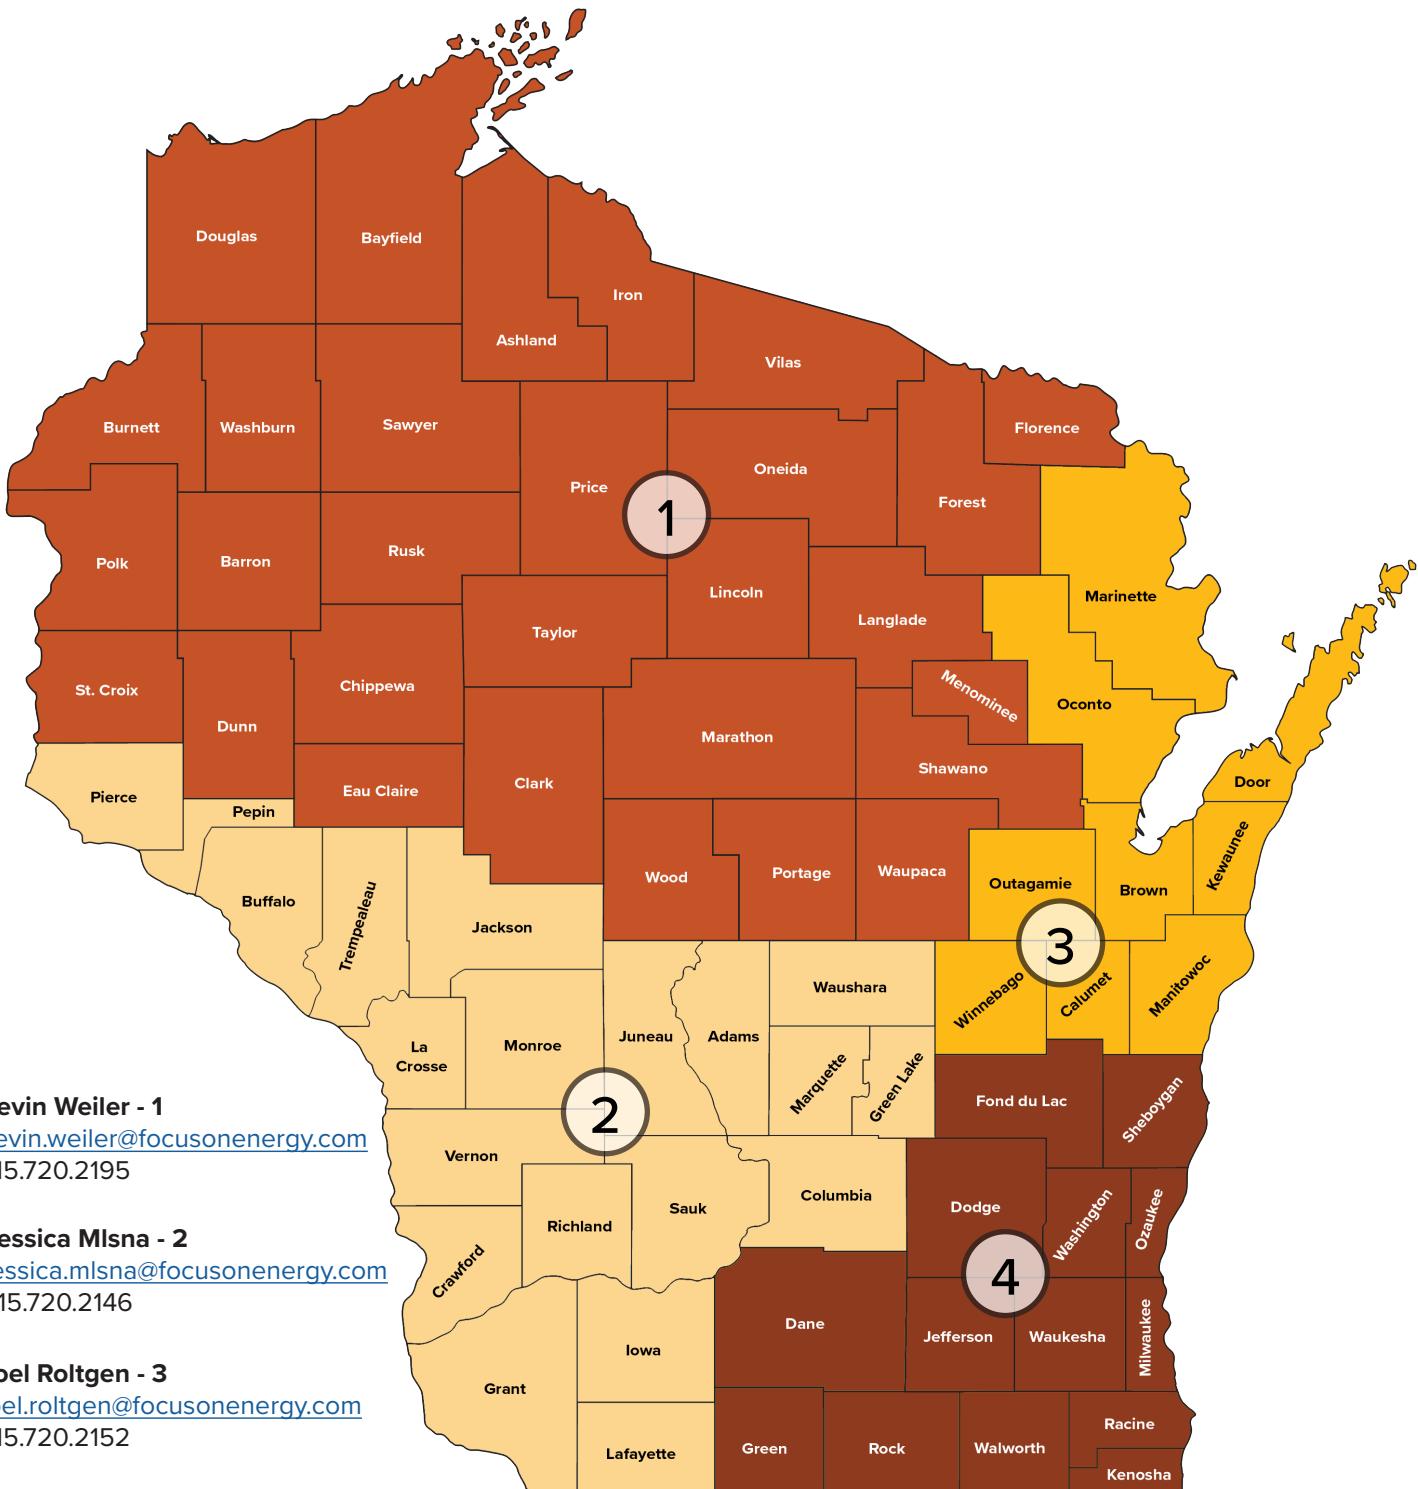

For additional questions, contact your local Energy Advisor (see reverse side).
