

CONNECT WITH AN INDUSTRIAL ENERGY ADVISOR

Looking to cut operating costs? Energy is something you can influence — but only if improvements align with production goals. FOCUS ON ENERGY® Energy Advisors work directly with manufacturing facilities to identify energy efficiency opportunities that support uptime, throughput, and long-term performance.

What Can an Energy Advisor Do For Your Facility?

- Identify energy efficiency opportunities that won't alter production, product quality, or throughput.
- Help you prioritize projects with the strongest ROI, supported by savings estimates and realistic payback periods.
- Improve project economics by identifying rebates and incentives across systems and processes.
- Avoid misaligned or non-qualifying equipment by confirming rebate eligibility before purchase.
- Save internal time and resources with help navigating the rebate and incentive application process.
- Document results and project success, supporting internal reporting and future capital planning.

Focus on Energy offers objective, technically-informed guidance to help you prioritize projects, understand payback, and reduce risk — before committing capital. Your Energy Advisor can discuss the full range of options for operations and maintenance optimization, equipment replacement, and renewable energy specific to your facility and processes.

Get Started

Find your county's Energy Advisor and contact information on the next page, call **800.762.7077**, or visit focusonenergy.com/business/manufacturing.
