

EFFICIENT LIGHTING

Lighting Overview

Upgrading your multifamily building with modern, high-efficiency LED fixtures and automatic controls can significantly reduce energy use while maintaining or improving lighting quality.

Benefits of LED Lighting

There are countless opportunities to make the switch to LEDs, including streetlights, common area lighting, lobby lighting, parking garage lighting, and exit sign lighting. With LED lighting, you can greatly reduce the electricity used by your property, as well as:

- Cut your utility bills significantly when you use high-efficiency LEDs outside.
- Improve safety and security with automated, highly directional, dependable lighting.
- Reduce your maintenance costs with longer-lasting LED bulbs.
- Help minimize the harmful effects of light pollution.

Make the Bright Choice

DesignLights Consortium® (DLC) qualified products must meet rigorous requirements for lighting performance, quality, and efficiency. Pairing qualified LED products with a networked lighting control system can take your energy savings even higher.

Custom Incentive Project Idea: More Light, Fewer Fixtures

Installing higher-lumen lamps allows you to remove lamps. Delamping can save you energy and maintenance costs, while still maintaining light output.

Schedule Your Appointment

Learn more about qualified equipment, discover cash incentives, and find a Trade Ally contractor to evaluate your equipment at focusonenergy.com/multifamily. Or, contact a representative at 800.762.7077.

Prescriptive Incentives

Available incentives include:

- LED lamp.
- LED downlight kit.
- Linear LED fixture.
- Interior mogul lamp.
- Exterior mogul lamp.
- Stairwell LED kit.
- Exit sign lighting.

REDUCING ENERGY WASTE ACROSS WISCONSIN

Incentives are subject to change and cannot exceed project costs. Focus on Energy, Wisconsin utilities' statewide program for energy efficiency and renewable energy, helps eligible residents and businesses save energy and money while protecting the environment. Focus on Energy information, resources, and financial incentives help to implement energy efficiency and renewable energy projects that otherwise would not be completed.
